

Agrofer self unloading picking trailer The next generation of bin train.

These trailers have been designed to carry bins for teams to pick into and to convey the full bins quickly and efficiently to the yard and to self unload. Modern orchards need to be efficient and this trailer is a fantastic way to save time and reduce costs. To prove it we have some fantastic results from one of the orchards where we have supplied these trailers.

Working results:

Total team 40 people (including tractor drivers, quality control and 32 pickers)

Output **190 bins per day** of quality checked and size picked fruit

This includes:

- ✓ Collection of bins from yard – bins can be transported quickly, efficiently and safely – the bin trailer is equipped with road legal tyres and lights (optional)
- ✓ Quality control in orchard – bins stay gathered in one place – QC can easily control the quality of fruit being picked.
- ✓ Reduced strain on pickers – Shorter distance to empty the picking bucket means that the pickers are less tired – will pick more and bruise less. The folding footboards (200mm wide) allow easier access to the bin to empty the fruit in comfortably.
- ✓ Return and unloading of bins in yard – they can be quickly returned to yard and due to self-unloading, use of forklift is not required. There is no soil contamination of the bins.

These trailers have proven to be very efficient and money saving. If you require more information please do not hesitate to contact us.

We also have some movies of these bin trains available.
